

DP/Com Release Notes 4.0

New features

- Improved placement of routes between nodes, right-click not required anymore to connect [11866]
- Pipe ordering in cross-sections has been improved, all cross-sections for a route are aligned in the same way [5641]
- When placing additional cross-sections to a route, the existing cross-section is used as a template to ensure that they look the same [5642]
- Automatically generated cross-sections of routes now looks like a trench to facilitate interpretation [9352]
- A product specification may be linked in the attribute form of the object when the object is created [11007]
- Multiduct connection diagram now displays color, lap and duct number [9313]
- Validation of cable connections in nodes. Only allow connection to rack or distribution point/ODF, if the cable is contained in a route connected to the node [10659]
- Extended product specification for ODF [11002]
- Extended product specification for cable [11003]
- Possibility to display attribute form when placing an event node [11718]
- Existing multi-ducts can be placed in other pipes just like cables and pipes [12137]
- New sub type "Route, air (measured)" [11415]
- Shorttexts for blowfiber in automatically generated graphics [10415]

New module for active equipment

- New object types Switch, Converter and Other active unit [10996][10997][10998]
- Connection dialogs support active equipment [10681][10999]
- Disposition reports supporting connection between Switch and ODF [10994][10995]
- Patch chain tool partially supports active equipment [10680]
- Connection diagram also supports converter [11000]
- Product specification support added for switch and converter [11004][11006]
- Active equipment supported in automatically generated graphics [12018]

Corrections

- Automatically generated graphics in active view does not lead to duplicates in function "Previous location" [9513]
- Minor changes in patch chain can now be saved [10766]
- Check box "Show attribute form" is disabled when no placeable object is selected [10812]
- "Show in map" in patch chain tool works correctly with active view [10872]
- Cable loops in automatically generated graphics no longer lead to duplicate cable symbols [10889]
- Automatically generated graphics refresh after placing cable loops [12036]
- When opening automatically generated graphics, no object is pre-selected anymore. [11125]
- Blow fiber cable possible to delete [8682]
- Undo of "Swap pipes" is now one single compound operation instead of several undo operations [11127]
- Sorting in connection dialogs no longer leads to incorrectly patched ODF sockets [11339]
- Automatic graphics for empty manholes no longer zooms incorrectly [12129]
- Text in dialog Post change set is no longer truncated (Dialog extends) [12028]
- Error when placing cable text fixed [12064]
- Undo after placing cable text no longer deletes cable [12130]
